

OUTPACE THE COMPETITION

Simplest system on the market:

- ✓ Fully wireless with AED autosense
- ✓ Advanced software with Scatter Reduction Technology
- ✓ Equine-specific defined protocols and quick processing with images in a few seconds
- ✓ Refine+ provides an ultra-clear, realistic representation of structures
- ✓ Waterproof detectors with on-board storage available

Configured with AGFA digital detectors for superb images and the reliability of industry leading, name brand equipment.

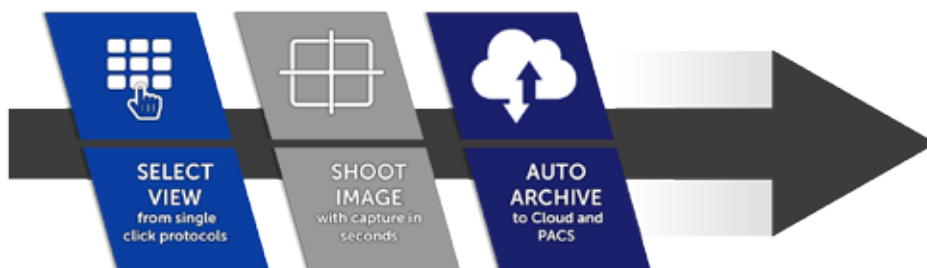

With a focus on portability and productivity, Stalo has streamlined the approach to equine radiography with its lightweight control station, equine specific exam auto-sequence software, fully wireless detectors and automatic syncing to PACS and Cloud. Your radiography workflow will be more efficient than ever.

With Stalo, you buy it, you own it. Unlike many of our competitors, we have zero mandatory ongoing fees and maintenance costs.

- ✓ **Extremely reliable:** Over 99% uptime rating.
- ✓ **Legendary service and reliability**
- ✓ **Minimal downtime:** 24/7 tech support with loaner panels available if repair is needed.
- ✓ **You own the software:** with many competing systems you are actually renting the software with fees for upgrading and selling.
- ✓ **Full on-site training and installation**

A SEAMLESS USER EXPERIENCE

Stalo's three step, optimized workflow allows for fast and efficient acquisition.

AGFA 
HealthCare

With Agfa's comprehensive DR portfolio, any way you choose, you are making the smart choice. Each of AGFA's DR solutions includes intelligent MUSICA® image processing, for "first-time-right" images with the possibility to reduce dose.

For decades, Agfa's MUSICA software, the "gold standard", has been delivering digital radiography image processing software that automatically produces optimized images.

- Automatic Exposure Detection (AED) allows seamless use with virtually all X-ray systems
- Improved workflow and examination speed
- Cassette-sized detector gives maximum convenience and portability
- Choice of Cesium Iodide (CsI) or Gadolinium Oxy-Sulphide (GOS) detector conversion screens
- Superior connectivity with DICOM compatible software and imagers
- MUSICA 3® processing for excellent contrast detail, consistent image quality, and 3 second exposure-to-exposure
